

Greenmaster Liquids – new insights

The Greenmaster Liquid range currently consists of;

- High N 23-0-0
- Spring & Summer 14-3-10
- NK 11-0-11
- Autumn 8-4-16

All products except the High N 23-0-0 contains a large proportion of Tripotassium Citrate within the formulation. Tripotassium Citrate has a number of benefits, including;

- Good chelating agent.
- Cation complexing agent.
- Feed/bio-stimulant for micro-organisms in soil.
- Enhanced Potassium uptake.
- Makes Fe available when previously locked-up in the soil (benefits of Fe nutrition without risk of staining / speckling).
- Potential worm irritant/re-locator.
- Benefits will be best seen in unfavourable soil pHs (due to chelating properties) and in soil with low phosphorous availability.
